Try Modding a Kernel and use it that way ... In this case puppy 6.3.2 linux ...  
&& Archive\*org && Sourceforge\*net && try port 403/80/23 and everything ...  
Both cores underclocked to 800 Mhz on 8 GB of RAM and runs fine as of now.  
Parent directory index of I don't know shit iso 32 bit ...  
Shitty IBM/Lenovo T400 T60/61 X200/201 P50 MSI Wind Slow Netbook POS ...  
DuckDuckGo/Google in Pale Moon/Brave/Dissenter Browser/Whatever ...  
Initial RAM Usage was again 87 MB in total on 32 Bit and better with SWAP ...  
Then Spoof your Mac Address : 1a1a1a1a1a  
Swap Partition is 20 GB and working fine for now on a RAM Based SSD...

Count the octets in New Hampshire and Utah and the Mormon Church owns  
all of it as one Company Monopoly or Corporatocracy/Theocracy ....  
The Act of 1871 claims that the United States is a Corporation and not for  
the people, but for the people to be servants of the Corporation and Zionism.  
Just count the octets of the IP addr. that shows up on a traceroute/packet
